Simple Design – High reliability

Energy capacity 0.1 kJ/cycle bis 1,000 kJ/cycle

Stroke 12 mm to 1,300 mm

The self-adjusting Viscoelastic Shock Absorbers are designed on the principals of hydrostatic compression to combine the funtions of a shock absorber and a spring.

The advantages are a high damping coefficient, a low sensitivity to temperature changes and increased security by integrated static preload.

Viscoelastic shock absorbers are being used across a wide range of applications within heavy industry. Examples include, Material Handling, Rolling Mills, Defense, Waterways and Paper production.

Technical Data

Energy capacity:

0.1 kJ/cycle to 1,000 kJ/cycle

Stroke: 12 mm to 1,300 mm

Impact velocity range: 0.5 m/s bis 5 m/s.
Other speeds on request.

Operating temperature range: -20 °C to +50 °C. Other temperatures on request.

Mounting: In any position

Positive stop: Integrated

Material: Steel or stainless steel

Damping medium: Visco elastic fluid

Application field: Industry, Material Handling, Rolling Mill, Defense, Waterways, Paper Industries

On request: special designs

VS-BA1

VS-BA1-Fc Front Flange

VS-BA1-Fa Rear Flange

The calculation and selection of the most suitable damper should be carried out or be approved by ACE.

Calculation Bases for the Design of Viscoelastic Shock Absorbers

Calculation steps 4 to 6 apply only to damper type VS-BA1FN.
Please contact ACE for detailed calculations for other dampers.

1 Selection chart

2 Effective energy calculation

$$W_1 = \frac{1}{2} m v_2$$

3 Allowable impact frequency

$$W_4 = W_3 \cdot x$$

4 Effective stroke calculation

$$H_e = H \left(\sqrt{\frac{W_1}{W_n (0.03 v + 0.24)}} + 1.36 - 1.17 \right)$$

5 Effective reaction force Q calculation

$$Q = \left[\left(\frac{Q_{\max} - Q_0}{H} \right) x C_e + Q_0 \right] (0.1 v + 0.8)$$

6 Application example

Given data:

Effective mass	$m_e = 15 \text{ t}$
Effective speed	$v = 0.8 \text{ m/s}$
Impact frequency	$x = 25 \text{ 1/h}$

1. Selection chart gives VS-BA1FN

The mechanical characteristics are:

$W_1 = 7 \text{ kJ}$
$H = 60 \text{ mm}$
$Q_{\max} = 150 \text{ kN}$
$Q_0 = 90 \text{ kN}$

2. An energy of $W_3 = 4.8 \text{ kNm}$ must be absorbed per stroke

3. Maximal frequency is $< 20 \times 7 / 4.8$

4. The effective stroke s_e amounts to 49 mm

$$60 \left(\sqrt{\frac{4.8}{7(0.03 \times 0.8 + 0.24)}} + 1.36 - 1.17 \right)$$

5. $Q = [(150 - 90) \times (49/60) + 90] \times (0.1 \times 0.8 + 0.8) = 122 \text{ kN}$

All performance characteristics can be modified.

Please advise us of your specific requirements.

T +49 (0)2173 - 9226-4100

Viscoelastic Springs

Extremely compact – High energy storing

The self-adjusting Viscoelastic Springs are designed on the principals of hydrostatic compression to act as high energy storing device.

The advantages are greater reliability, extremely compact design and an easy installation.

Viscoelastic Springs are being used for work rolls of the steel industry.

Additional information available upon request.

Technical Data

Operating temperature range:
-20 °C to +50 °C. Other temperatures on request.

Mounting: In any position

Positive stop: Integrated

Material: Steel or stainless steel

Damping medium: Visco elastic fluid

Application field: Rolling mills, Hot strip mills, Cold strip mills, Skin pass mills, Tin mills, Temper mills, Plate mills, Slab/Bloom mills, Bar mills, Rod mills, Sluices, Ports
